

QR code

● Tutorial

Using QR codes is very simple and easy. With this tool, you will surely inspire your pupils to engage in the lesson.

1. Type "QR Code" in the search box of your web browser. Choose one of the available QR code creation websites, click "+Create".
2. Select the QR Code campaign type, upload your file (picture, video, document and ect.), or paste the file URL.
3. Customise your QR Code appearance. Design your QR Code as per your brand aesthetics for better visibility. Change the QR Code colour or shape, and add a logo, CTA, and frame. Once done, click "Next".
4. Your QR Code is ready for distribution. Scan and test your QR Code. Download it in any of the formats available and share it with your student.

● Example

Geography. Europe's longest rivers. (Secondary Level - Ages 14)

- Choose a map of Europe to use as a basic visual aid.
- On this map, insert a QR code next to each of Europe's longest rivers with additional visual material (the most impressive photo of the river, a video, information about the river that the student needs to learn, etc.).
- For creating each QR code, follow the instructions already described in the section above. The QR codes can be different colours, for example a yellow QR code for a photo, a red QR code for a video, and a green QR code for textual information.
- Once the students have this map with the QR codes, they can explore it, scan the QR codes with their phone or tablet, and access the information you have provided.
